EXPERIENCE

Bayer | Data/AI Engineer | Creve Coeur, MO

Jan 2026 – Present

- Proposed, designed, and presented a target-state architecture for Bayer Crop Science's Seedbin supply-planning pipeline, replacing a fragmented 3-platform legacy stack (SAP HANA DW, Azure Data Factory, custom Python/cron) with a unified GCP-native pipeline (Cloud Composer + BigQuery) thereby eliminating Azure Data Factory licensing costs entirely.
- Built a self-service ETL framework via a YAML-driven Airflow DAG factory on Cloud Composer, powering 101+ production BigQuery ↔ AWS S3 Inbound/Outbound pipelines from a codebase, new data sources onboard through config alone, with zero code changes.
- Architected a 3-stage CI/CD pipeline (GitHub Actions) with branch protection and mandatory peer review across PR validation, Dev, and Prod stages, cutting deployment time ~97% (15 minutes to under 30 seconds) for a team of 5 developers.
- Designed a POC Sentinel, a multi-agent AI system (Google ADK, Vertex AI/Gemini, RAG Engine, MCP) to autonomously monitor BigQuery/Cloud Composer pipelines, correlating structured control-table errors with unstructured Cloud Logging signals to diagnose failures and draft human-reviewed fix proposals as GitHub PRs.
- Developed a repeatable Python-based field/table-mapping methodology, validated against a 70,000+ row SAP-to-BigQuery translation table with automated type/format consistency checks; adopted as the team standard for subsequent SAP HANA-to-BigQuery view conversions.

Sabre Corporation | Data/AI Engineer | Southlake, TX

May 2025 – Dec 2025

- Architected a GCP-based Customer 360 data model integrating SAP, ServiceNow, and Salesforce, consolidating enterprise data across 3 source systems into a unified BigQuery layer.
- Delivered an end-to-end Salesforce-to-BigQuery ETL migration featuring Top-N analysis, 30/90-day trend models, and drill-down Looker dashboards, eliminating an estimated 15 hours per week of manual SQL querying.
- Built a production text-to-SQL assistant on top of Customer 360 BigQuery tables, enabling non-technical stakeholders to retrieve KPIs and run ad-hoc analyses through natural language.
- Built Ask-AES, a conversational multi-agent analytics chatbot using Vertex AI and Google Agent Development Kit (ADK), plus a BigQuery analytics agent, RAG agent, and ServiceNow automation agent, reducing ad-hoc reporting turnaround from hours to seconds.

EDUCATION

Arizona State University | M.S. in Computer Science | Tempe, AZ

Aug 2023 – May 2025

GPA: 3.73 / 4.0, Awarded NAMU Scholarship

S.R.M. University | B.S. in Computer Science | Chennai, India

Jul 2019 – May 2023

GPA: 3.75 / 4.0

SKILLS

Languages: Python, SQL, Shell Scripting, JavaScript

Data Engineering: ETL/ELT, Medallion Architecture, Dimensional Modeling, Apache Airflow, dbt, Apache Kafka

Cloud Platforms: GCP (GCS, BigQuery, Cloud Functions, Dataflow, Dataproc, Pub/Sub, Composer), AWS (S3, Lambda, Glue, Step Functions, Athena, Redshift, Kinesis, EMR, SNS), Azure, Snowflake, IAM

AI/ML Engineering: Vertex AI, Agent Development Kit (ADK), Model Context Protocol (MCP), RAG, LLM, TensorFlow, PyTorch

Databases & Tools: Docker, Git/Gitlab, CI/CD, Looker, Power BI, Tableau, Quicksight, PostgreSQL, MySQL, SAP HANA, SAP BO, Denodo, ServiceNow, Streamlit

PROJECTS

Zomato AI Data Pipeline

- Built an end-to-end S3 → Snowflake (raw) → dbt (staging → marts) → Airflow production pipeline processing 10M+ orders.
- Designed an OpenAI-powered Enrichment, RAG and text-to-SQL analytics layer served via a Streamlit and SnowSight interface.

YouTube Trending Data Pipeline

- Architected a serverless AWS ETL pipeline utilizing Lambda, Glue, Step Functions, IAM, EventBridge, and Athena.
- Implemented a strict bronze-silver-gold medallion architecture featuring automated data-quality gating.

ADDITIONAL EXPERIENCE

Business Intelligence Platform Intern | UIUC

Jan 2023 – Apr 2023

- Administered SAP BusinessObjects (CMC security, LCM content migration) and Denodo VDP across Dev/QA environments.
- Built role-based access control (RBAC) via VQL and resolved complex LDAP/AD authentication issues.

Bosky Buildcon | Data Analyst

Sept 2022 – Dec 2022

- Conducted cost-efficiency analysis across 12 construction projects using SQL, identifying a 15% overhead savings opportunity.
- Built Power BI/Tableau dashboards with automated Python reporting that cut manual operational workload by 40%.

Youth India Foundation | Head of Finance Department

Nov 2021 – Nov 2022

- Directed data-driven resource allocation and financial planning for 5 national events, reducing overall costs by 15%.
- Spearheaded regional intern recruitment and structured onboarding to optimize cross-functional operations.
